

Panel plus

SANDWICH PANELS AND COMPOSITES

www.panelplus.it

PanelPlus is the sandwich panel for a new way of building.

It allows the realization of increasingly ambitious projects due to the combination of strength and lightness that make it unique if compared to other products on the market.

PanelPlus is Light

Greater **ease of assembly** and **less structural load** on buildings that are obsolete or undergoing restructuring. **Low cost** of the substructure and an **eco-sustainability** due to the lower fuel consumption of the means of transport.

PanelPlus is Strong

High mechanical performance and high dimensional stability; incomparable **stiffness**, pound for pound, compared to any other material.

PanelPlus is Versatile

Panel Plus **suits** to different application fields, ranging from **building** and **naval** sectors to the **furniture** world.

PanelPlus is Customizable

The panel composition is **chosen by the customer**, who can combine the different materials according to their needs in terms of finishes, thickness, internal core and dimensions.
